

INNOVA

CLASSIC 2.0

A NEW DESIGN OPTION

A different look for a visual choice. The design of the user interface sets apart the previous and latest interface design of two Classic controls but their functions are both similar.

The Classic 2.0 is now built with a stainless casing from thick metal sheet. The metal casing is with spikes to secure it firmly into the wall when installing as flush mount. Optional interface holder can be ordered if the user interface is installed on the wall surface. The interface foil is black with figurative icons.
